How to use the free distributed WAR package

For the most of people, it is not necessary to download and install the WAR package. Please visit a web site with the WAR package installed, for example, https://www.biosino.org/genbrowser and https://bigd.big.ac.cn/genbrowser.

It is easy to install the WAR package on a website.

1) Ensure that the website (http://www.example.com, managed by Apache Tomcat) is running.
2) Visit http://www.egps-software.net/ and download the war file (genbrowser.war) to the webapps directory of tomcat.
3) Open http://www.example.com/genbrowser or https://www.example.com/genbrowser.

If you have more questions, you may want to infer the instruction page of tomcat at https://tomcat.apache.org/tomcat-9.0-doc/appdev/deployment.html.

If you need a version supporting your own language, please write an email to us (lihaipeng@picb.ac.cn, zhaowm@big.ac.cn, or gqzhang@picb.ac.cn). We will try our best to make a new version, together with you.
